PROFESSIONAL SUMMARY

Product manager with 5+ years building AI and fintech products end to end. Owns core platform capabilities on an enterprise agentic AI platform, spanning agent observability and governance, the semantic layer, and a platform-wide UX rebuild. Earlier, ran risk and regulatory reporting products across 12 markets at Standard Chartered and shipped two AI products from zero to launch. MBA, IIT Delhi. Looking to build AI-native platform or fintech products at scale.

EDUCATION

IIT Delhi, New Delhi MBA, Product Management	2019 – 2021
LDRP-ITR, Gandhinagar Bachelor of Engineering	2014 – 2018

EXPERIENCE

Brillio | AI Product Owner, ADAM (Enterprise Agentic AI Platform) Jul 2026 – Present

- Built the platform's Control Tower, a single observability and governance surface monitoring every deployed agent across 7 dimensions including cost, model, prompt, and security, cutting agent incident triage from hours to under 30 minutes and giving platform owners per-agent cost attribution for the first time.
- Shipped Semantic Fabric, the platform's governed ontology and knowledge graph layer that supplies trusted business context to agents, lifting retrieval accuracy ~25% in internal evals and cutting onboarding effort for new agent use cases ~30%.
- Led the end-to-end reimagining of the platform UX, replacing capabilities scattered across the product with a single coherent structure: defined a new platform-wide taxonomy and rebuilt user journeys for 7 modules against 5 personas, reducing task-completion time ~35% and clicks-to-first-agent-run by half in usability testing.
- Drove an enterprise pursuit for a large US commercial bank end to end: ran client working sessions, built the capability-to-ROI narrative, and directed engineering on demos for organization-wide vulnerability fix ranking and an agentic development lifecycle (ADLC), contributing to an \$800K win.
- Redesigned commercial banking onboarding as an agentic to-be flow with human-in-the-loop gates at each control point, compressing a 3 to 7 day multi-step process to 2 to 3 days with no loss of governance coverage; extended the same pattern to lending, cards, and payments as proof-of-concept workflows.

Standard Chartered Bank | Product Manager, Credit Risk Sep 2022 – Jun 2026

- Led a three-phase risk reporting platform serving 12 markets and 5+ business units: governed ingestion from 20+ upstream systems, a unified master table as single source of truth, and LLM-drafted commentary with hallucination guardrails, replacing manual SQL and Excel pipelines to cut risk appetite reporting from 3 days to 4 hours and free ~15 analyst-hours per cycle.
- Designed self-service dashboards for Nostro, Risk Appetite, and Large Exposure used by 50+ risk analysts across 20+ markets, cutting ad-hoc data requests ~40%.
- Owned a data lake initiative with end-to-end lineage tracking, lifting data completeness from ~70% to 92% across 20+ feeds; shipped 30+ quarterly releases against fixed engineering capacity and regulatory deadlines.

Prodapt Solutions | Presales Consultant May 2021 – Aug 2022

- Rebuilt the RFP/RFI response playbook around customer pain points for large technology clients, contributing to \$3M in new revenue, a 20% lift in deal close rate, and 15% annual revenue growth.

Addivity | Co-founder & Head of Product | [Pitch Deck](#) Mar 2020 – Apr 2021

- Took an EdTech marketplace from blank PRD to launched MVP in 6 months, owning strategy, user flows, UI/UX, and RICE prioritization, scaling to 240+ students and 65+ corporate partnerships before exit.

PROJECTS

- StockSage AI (Equity Research)** | [Live: `agentic-workflow-analysis-for-india.vercel.app`](#)
Compressed institutional-grade equity analysis from hours to ~30 seconds for NSE + BSE coverage using a 6-agent LangGraph architecture (fundamentals, technicals, sentiment, peer comparison, judge, synthesis) with explicit confidence scoring and a veto layer. Stack: LangGraph, FastAPI, Next.js, Groq, Gemini.
- GiftSense (AI Gifting Engine)** | [Live: `giftsense-rust.vercel.app`](#) | [Presentation](#)

Built an AI gifting engine using multi-signal profiling on India's ₹6.25L Cr (~\$75Bn) gifting market. Intent signals from WhatsApp chat history extraction which improved recommendation relevance in user testing (n=30) and became the core differentiator vs. Amazon and IGP. Stack: Next.js 14, TypeScript, Gemini 2.5 Flash.

SKILLS

Product Management: Product Strategy, Roadmapping, Prioritization, PRDs, User Research, Discovery, A/B Testing, Product Design, Go-to-Market, Stakeholder Management, Competitive Analysis, Agile, Scrum

AI / LLM: Agentic AI, Multi-Agent Systems, LLM Product Design, AI Observability & Governance, RAG, Knowledge Graphs / Ontology, Prompt Engineering, Evals, Human-in-the-Loop Design, LangGraph

Fintech Domain: Payments, Lending, Digital Onboarding, KYC/AML, Credit Risk, Regulatory Reporting, Basel III / IV, IFRS 9, Compliance, Data Quality, Data Lineage

Data & Tools: SQL, Python, Figma, Tableau, JIRA, Confluence, Hadoop
